

testing::Test

```
classDiagram
    class testing__Test {
    }
    class tracc_tests_data_test {
        # data_directory
        # SetUp()
        # get_datafile()
    }
    tracc_tests_data_test --|> testing__Test
```

The diagram illustrates a class hierarchy. At the top is the 'testing::Test' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name, while the other two are empty. Below it is the 'tracc::tests::data_test' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name, the middle one contains '# data_directory', and the bottom one contains '# SetUp()' and '# get_datafile()'. A blue arrow with an open triangular head points from the 'tracc::tests::data_test' class to the 'testing::Test' class, indicating that 'tracc::tests::data_test' inherits from 'testing::Test'.

tracc::tests::data_test

data_directory

SetUp()

get_datafile()
